THESIS & RISKS (edit freely)

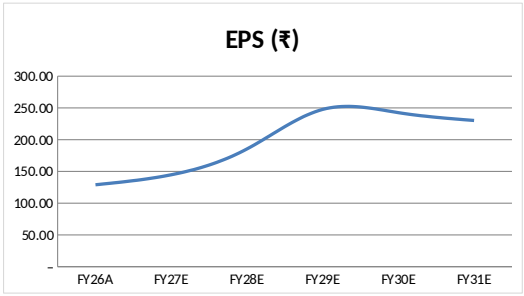

+ Largest non-Chinese module maker (~26 GW) with a record ~₹61,500 Cr order book.
+ Own cells (5.4 → 15.4 GW) and wafers lift margins as the own-cell share rises.
+ New businesses (BESS, T&D, inverters, electrolysers) widen the growth runway.
– Indian module oversupply could push prices down faster (lever: module price).
– US tariffs / 45X credit rules are a big profit swing (levers: US price, 45X).
– Input-cost spikes, as seen in Q1 FY27 margins (lever: raw-material cost).

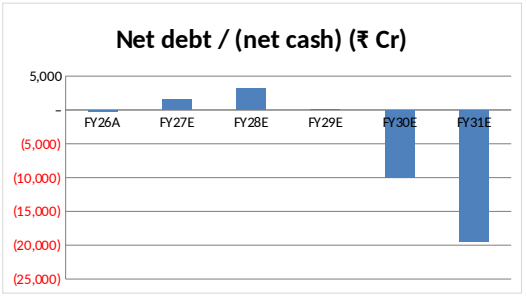

HOW TO USE

1. Assumptions tab: pick Base / Bull / Bear and edit yellow cells. Blue = input, black = formula, green = link to another tab.
2. Hover over blue inputs for sources. Anything marked ESTIMATE should be replaced from the FY26 Annual Report.
3. Tabs flow left to right: Assumptions → Revenue_Costs → Schedules → Financials → Valuation → Dashboard.
4. For education and analysis only – not investment advice.
